

My name is Carter and I'm 3 years old. I like Elmo, shooting baskets, swimming and my bulldog CeCe. I also have Eosinophilic Esophagitis. I was diagnosed with "EoE" in January 2011 and I am still learning how it will affect me as I grow up. I currently drink a special formula made just for me through a feeding tube in my tummy. I am trying to find "safe" foods for me to eat, currently I have none. I have a long road ahead of me and could use all the support I can get!

Eosinophilic disease is a very complicated and complex disease that depletes the body of iron and essential nutrients necessary for proper development and physical growth. In addition, the symptoms associated with this disease are painful cramping, bleeding, vomiting, and polyps. In many cases, children develop severe damage to their digestive tracts. Due to lack of nourishment caused from multiple food allergies or intolerance to so many foods, some children must rely on a simplified liquid formula or a feeding tube for their nutrition on a daily basis. IMAGINE A CHILD LIVING THEIR DAYS LIKE THIS....

Come join us for Carter's Walk for CURED at Yokuts Park

10K Run, 5K Run or Walk, and Family Fun Day

May 20th, 2012

100% of the funds donated will go directly to research.
