

Hagen Birck was diagnosed with a rare disease called Eosinophilic Esophagitis when he was only 8 months old. With EE, white blood cells view foods as a pathogen and attack his body. With no cure, he will always live a life with major food restrictions

Cured Foundation works to find a cure for Eosinophilic disorders. 100% of proceeds go to funding for research so that Hagen and other children like him do not have to go through this awful disease.

Hagen and his sister, Riley will be running a fun run while their mother, Ronnie will be running a half marathon to raise money and awareness for Cured Foundation in New Braunfels, TX on October 27.

Please go to CUREDfoundation.com to learn more about this disease and to also make a donation to help cure Hagen and many other children.
